- Fabric selector
- EMF & SVG import
- Embroidered patch wizard

Expanded letter functions

- 120 integrated alphabets
- 10 small fonts 6mm or less
- Transform text
- Contour
- Monogram

Link (connecting) function for professional tasks

Embroidery designs can be sent from the computer to be embroidered on multiple embroidery machines. You can use the computer to select which embroidery machine should embroider which embroidery pattern and the relevant data can be transferred to the machine. During the embroidery process, a status monitoring

function for each machine on the computer is possible. (The PR-1000 and PR-650 Ver. 2 of Brother can use the link function.)

Over 1000 built-in designs

Wide variety of embroidery designs included

Insert names

Simply by replacing text, e.g. a name, you can create a whole series of identical embroidery designs with pre-aligned text. (Allows a list of up to 500 names to be created.)

System requirements

- PC: IBM PC or compatible PC
- Operating system: Windows Vista®/Windows®7/Windows®8/8.1
- Processor: 1GHz or higher
